

Instant Noodles

By Anthony Li

*Warning: This piece has no plot, only pots for noodles because plot needs development and time and you don't find that in **instant** noodles.*

Instant noodles is the prime food in the universe—actually universes as stated in Dragon Ball Z (Only divisible by one and itself). It is the food that even the gods fight over. When they do, it causes an instant decline in instant noodle stock, boosts production which is really good for the economy. Instant noodles are the best. You can eat the noodles first and then you can drink the broth.

Instant noodles are really fast to cook and you can have them almost anywhere! Just put boiling water in an extremely good thermos and take an instant noodle cup with you and *BAM* anywhere, anytime insta noodles; *BAM* anywhere, mobile twelve course instant noodles, one cup every course; *BAM* you get rich; *BAM* you use the money to buy more instant noodles; *BAM* everyone is happy. And, as an added bonus, I get to tell everyone about string theory without them fleeing in terror because they'll be too busy eating.

We know that everything in our world is either a solid, liquid or gas. Instant noodles are all three. The solid noodle, the liquid soup and the gaseous soup vapor. Thus we can infer from this information that instant noodles make up the fabric of our world. Instant noodles are made from strings. No, I don't mean the shape of the noodle. I mean, strings that not even the best microscope can see. So small that it is just a theory.

This space is reserved for the sponsor I do not have.

Instant noodles have become so popular that even the witch in *Hansel and Gretel* has decided to rebuild her house with instant noodles. But, I'm not sure how it would fare in a hurricane or storm considering the current growing intensity of such disasters. I doubt that the house could withstand a 'La Niña'. The candy corn glue must be really strong for the house to stay together. Maybe the witch should relocate the house to a cave. However, Rule 81,725 of '*The Guide To Fairy Tales For Dummies*' states that you should always check if there are residents *cough cough* dragons in a cave before moving in yourself. Otherwise you would become dragon noodle soup. Though I'm sure that the dragon would appreciate it.

Scientists don't have that much time to eat and instant noodles are an efficient source of no-nutrition. Thus we can link these two facts together and conclude that instant noodles lead to scientific breakthroughs and the ultimate development of society.

Research also shows that scientists are too preoccupied to cook. That is why instant noodles are prescribed to scientists to maintain personal relationships. If you have a partner who can only manifest indescribable atrocities of an attempt to cook a dinner of no nutritional value, you can instead obtain a cup of instant noodles and have a delicious meal that has an equivalent amount of nutrition.

Grab a cup of instant noodles, tear the lid halfway. Take the flavor packets out and empty them onto your noodles. Pour boiling water up to the line (Don't burn yourself!). Wait. Three.

Minutes. Take a sip of the soup. Now you are one with the soup. It spirits you to noodle land and instantly all your worries dissipate. You see all these ideas around you from noodles to more noodles.

Well, *my* next cup of noodles is ready, so I'll see you the next time you visit noodle land.

Note: There is no hidden thing that I want you to take away from this piece. This piece does not provide you with the same nutrients as Broccoli.
