

WARNING-THIS TEXT HAS BEEN SALVAGED FROM A RECENTLY RECOVERED CAPSULE THAT WAS PULLED INTO EARTH'S ORBIT. IT IS BELIEVED TO HAVE BEEN WRITTEN BEFORE THE ALLEGED 'BIG KABAM', AN EVENT THAT OCCURRED BEFORE THE WORLD'S BIG BANG. IT IS THOUGHT TO BE A WARNING, PREDICTED BY A CIVILIZATION THAT HAS LONG SINCE VANISHED. THE TRANSCRIPTION IS UNCLEAR AT TIMES.

*Did you know it's truly spectacular to see the dawn before something big and Universe-changing happens? Not just a rare Embermoon or an average 19-star-alignment- but something far greater. You can see it first in your star, or in my and the other [NOT ABLE TO BE TRANSLATED]'s case, binary stars. If you were to go in an absolutely heat-proof starship, you may even be able to see flakes of translucent light slide off your stars, and a layer of murky brightness covering them, almost as if it was a melting [pastry, dessert, food, or some kind of edible substance], with the denser [material that is within the substance, or is part of making the substance] sinking to the middle and all the other parts floating up to form a kind of melting membrane.*

*You would, of course, feel incredibly light-headed. There would be swirling clouds and disastrous meteorological phenomena in parts of your planet, and in other parts the stars would be beating down with harsher light than ever. Birds lose track of the magnetic fields. Often clouds will drift unnaturally triggering erratic weather patterns, unpredictable storms or temperatures.*

*Spikes of strange occurrences will continue to happen over the next several billion years as the universe eventually expands infinitely until it implodes upon itself. There will be significantly large piles of space dust floating in the cosmos possibly causing the formation of more [Planets, galaxies, suns or some kind of astrological structure] and [NOT ABLE TO BE TRANSLATED].*

*This text serves as a warning to those reading it. I do not know yet which newly formed or not yet existent planet this will be received by- it may even be that by addressing this you cease to exist- but it is of utmost importance that you perform the instructions for you at the end of the [REDACTED], all life in the universe may depend on it.*

*Let me tell you something: the universe is far older than you may think or believe. You may be counting from the [REDACTED] some 13.7 billion years into the future, or even from the much later [REDACTED]. Details on the latter are unclear, but all that can be seen is fog, mist, [A SUBSTANCE OR ELEMENT THAT WE CANNOT COMPREHEND].*

*The story of the cosmos began almost 15 billion years ago before any life existed and when only scattered material and fragments were floating in the empty world.*

*The world, at least initially, was composed of five dimensions, five spiritual pillars, and elements.*

*These ethereal entities did not exist as you might imagine them today, or even as they were understood in my time. They were beyond description, much like the universe itself. It might be a little like trying to describe the brain - a difficult task as I'm not quite sure what yours might be like. The five elements and dimensions were confusing to even the greatest [Scientist, historian, researcher of some sort]'.  
[REDACTED]*

*I'm not going to bore you with the entire history of the universe etc, because this capsule can only carry so much information and it is, I'm afraid, quite dull even to us.*

*The only thing you need to know now is that, many years ago our [Scientist, historian, researcher of some sort] spotted a faded 'object' streaking across the sky. It moves a little every day, closer, possibly the cause of the unusual events described before. It is estimated to be many light years in diameter. We don't know when or where it may hit, nor whether it will. Or perhaps it's already happened and there's no one to receive this. But still we're hoping we can change your fate.*

*The first set of instructions you must follow immediately after you see even the slightest hint of the 'object', and otherwise will be ineffective*

*However if there's a giant glowing light almost as large as your star/s then I suggest you follow the second set of instructions. Your planet WILL be-*

**[UNFORTUNATELY THE REST OF THE MANUSCRIPT IS UNAVAILABLE TO THE PUBLIC AND HAS BEEN REDACTED FOR SECURITY REASONS]**
